**For immediate release**

**NEW Case Packing & Handling Systems Technologies  
and DeepLane™ Pallet Flow Systems at Westfalia's Pack Expo Booth #S-4919**

***No Need to Sacrifice Speed For Smooth Product Handling with Westfalia's  
Case Packing & Handling Systems Due to  
Innovative Load Heads, Grippers and Hybrid Power***

**YORK, Pa., September 15, 2009** – Westfalia Technologies, Inc. is pleased to introduce its latest innovations in load heads, grippers and hybrid power for Case Packing and Case / Pallet Handling Systems in their **2009 Pack Expo booth #S-4919**. Located at the Las Vegas Convention center October 5-7, Westfalia's booth will highlight these recent technological advances which enable companies to meet or even exceed the speeds of their processing lines, while also providing fast and smooth product handling. With their casers, case stackers, case palletizers, pallet flow systems, Automated Storage and Retrieval Systems (AS/RS), and

*Savanna.NET®* Warehouse Management Software, Westfalia Technologies, Inc. provides a total logistics solution for handling products from production to storage to customer order selection and shipping.

As recently announced, Westfalia has a newly designed **Half Gallon/2**

**Liter Carton Caser** which loads up to 160 cartons per minute utilizing an air powered load head. A new **Hybrid Powered Case Stacker** which operates with a hydraulic lift and compressed air, that is

capable of stacking 25 cases per minute. Also, under construction is our newest **Quart Fractional Carton Caser** which packs up to 240 units per minute of quart, pint or half pint cartons.

**DeepLane™ Pallet Flow Systems** will also be highlighted in Westfalia's booth. These deep lane storage systems are an inexpensive option to double the capacity of a warehouse. Westfalia offers both deep lane (FIFO storage) and push back (LIFO storage) pallet flow systems, which can be integrated with order picking. These pallet flow systems can also be integrated with an **Automated Storage & Retrieval System (AS/RS)** for

semi-automated replenishment for full pallet and case picking.

**Savanna.NET® Warehouse Management Software** integrates all these material handling systems to control, manage and provide real time data of all product flows throughout the supply chain. It integrates easily with existing ERP systems, and has a modular framework whereby companies can select only the functionality they require. This modular framework also allows companies to expand into

automation in steps, as they grow.
