

### Westfalia Offers an Independent SRM Cabin for Easier Maintenance

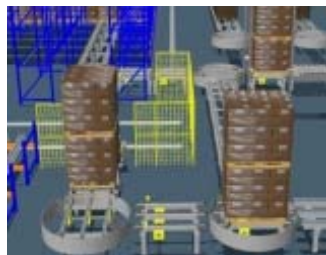

*Brings safety of customers to forefront*

Westfalia is expanding its product range with a new Storage & Retrieval Machine (SRM) option sure to spark interest in the market. They have developed an SRM with a separate employee lift cabin which is independent from the vertical pallet lift and its load carrying device. It is able to transport one person in the lift cabin up the mast of the crane, thereby avoiding the practice of climbing up the service ladder. Westfalia's supplychain experts developed this new SRM feature to enhance the safety, comfort and flexibility of automated warehousing staff during preventative and periodic maintenance.

"We bring the safety needs of our customers to the forefront with our new technology," explains Dan Labell, President Westfalia Technologies, Inc. "Placing a moveable independent cabin on the Storage and Retrieval Machine (SRM) provides additional safety and comfort for personnel operating and maintaining an automated warehousing system. This user-related feature adds real value to our customers, especially in the frozen food industry," states Labell. "At temperatures of -28 °C the employee who is restricted in his movement due to thermal clothing will be happy about any form of assistance."

Dairy Case Handling?**

*Check out Westfalia's  
NEW Empty Case  
Depalletizing  
& Handling Systems*

With its Dairy Case Depalletizing Systems (shown), Westfalia's Deam Systems division now offers a completed revamped line of Case Packing and Handling Equipment to move beverage cases throughout a plant from fillers to storage to the shipping dock -- in either cooler, freezer or ambient environments. Westfalia Deam is known for designing and constructing compact, durable, all stainless steel material handling equipment ideal for the tight spaces of juice, dairy and other beverage companies.
